

What's New for Developers in SQL Server 2008

Technical Depth: 300

A 2-day interactive workshop that drills down into new features, tools and best practices for developers working with SQL Server 2008.

Why attend?

This popular workshop will broaden and deepen your understanding of the new and upgraded development features in SQL Server 2008.

You will gain new knowledge and confidence through the right balance of theory, insights and hands-on experience.

Theory – presentation-based content and instructor-led demos are combined to introduce topics and explain the detail behind the concepts.

Insights – theory is enhanced with nuggets of real world experience gained from implementing, optimising and performance tuning SQL Server 2008 for our clients.

Hands-on Labs – try out the new features for yourself on your own instance of SQL Server in several supported lab sessions throughout the two days.

Who is it for?

This level 300 workshop is for development professionals who create or maintain database applications, schemas or queries. Attendees should be familiar with developing databases and queries with SQL Server and its T-SQL query language.

What you will learn

Day 1:

On the first day you will learn about changes to the most commonly used parts of SQL Server: client tools, T-SQL query language and database table design. Features covered will include:

- Changes to SQL Server Management Studio
- T-SQL assignment operators and row constructors
- The new merge command
- Enhancements to date and time storage
- Indexing enhancements
- Data compression

Day 2:

On day two you will learn about the new features in SQL Server 2008 for handling non-relational data and tracking changes to data within databases. We will also explore SQL Server's integration with the .NET developer world by reviewing SQL Server's support for XML data manipulation and CLR assemblies. Features covered will include:

- Manipulating spatial and hierarchical data
- Tracking data changes
- Using full-text indexing
- XML and CLR support

How to book
