

Architecture Workshop

Find a data platform strategy that is cost-effective and operationally appropriate for your business.

While change and innovation help businesses grow, they can also create challenges for those running the data platforms organisations depend on.

As businesses evolve, they often find new technologies are needed to get better insights from their data, more robust platforms are required to meet increased expectations, or aging platforms are just not cost-effective or supportable anymore.

Why Coeo?

Founded in 2007, Coeo is Europe's number one data platform specialist. Our consultants work with the latest Microsoft data platform technologies every day and bring this experience to each customer engagement, working with you to understand the needs of your business, your process and your needs and providing tailor-made recommendations that offer maximum benefit.

Assurance

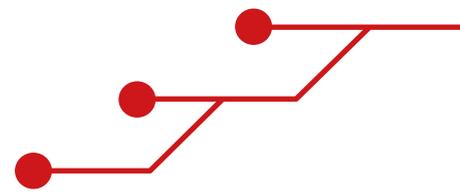

Coeo's architecture workshop service provides personalised and experience-based guidance to help businesses transform confidently and effectively. It reduces the time needed

to make strategic technology decisions by helping leaders understand their priorities and identifying the business benefits of future investments. It then helps reduce the risk of project failure by providing technical teams with detailed design guidance about how and why to deploy a future solution. Coeo's team bring strategic design skills that complement an organisation's existing operational knowledge and help them build the most appropriate solution to meet their needs.

Scope and Focus

The scope of a Coeo architecture workshop is flexible and can be as broad or as deep as a specific project needs it to be. Data platform workshops often focus on the modernisation or consolidation of existing database servers, or migration of servers to the cloud. Business intelligence and analytics workshops typically help businesses understand how to prepare their operational data for analysis and then provide dashboards and interactive reports to their staff.

Coeo's Approach

Over two days, a Coeo consultant leads your team through requirements scoping and solution design workshops. They use their hands-on technical experience and a seven-step process to provide a solution that supports both your business requirements and technical objectives:

The deliverable from this workshop is a report containing both our strategic recommendations and detailed guidance on technical design and deployment for your environment.

1

Clarify business goals, challenges & future plans

5

Consolidate and prioritise your requirements into a set of solution design goals

2

Identify how data platforms can help achieve immediate business objectives

6

Discuss & review the possible options to meet those design goals

3

Define technical requirements for future solution including constraints & dependencies

7

Create a recommended solution design

4

Understand your existing data platform capabilities & any integration requirements

If you have the Microsoft Software Assurance benefit, you may be entitled to partial or full funding for this Coeo workshop. Speak to your Coeo account manager to find out more.
