Coeo

Architecture
Workshop

Find a data platform strategy that is cost-effective and operationally appropriate for your business.

While change and innovation help businesses grow, they can also create challenges for those running the data platforms organisations depend on.

Assurance

Coeo's architecture workshop service provides personalised and experience-based guidance to help businesses transform. It reduces the time needed to make strategic technology decisions by helping leaders understand their priorities and identifying the business benefits of future investments. It then helps reduce the risk of project failure by providing technical teams with detailed design guidance about how and why to deploy a future solution. Coeo's team bring strategic design skills that complement an organisation's existing operational knowledge and help them build the most appropriate solution to meet their needs.

Scope and focus

The scope of a Coeo Architecture Workshop is flexible and can be as broad or deep as a specific project needs it to be. Data platform workshops often focus on the modernisation or consolidation of existing database servers, or migration of servers to the cloud. Business intelligence and analytics workshops typically help businesses understand how to prepare their operational data for analysis and then provide dashboards and interactive reports to their staff.

Coeo's Approach

Over two days, a Coeo consultant leads your team through requirements scoping and solution design workshops. They use their hands-on technical

experience and a seven-step process to provide a solution that supports both your business requirements and technical objectives:

1. Clarify business goals, challenges & future plans
2. Identify how data platforms can help achieve immediate business objectives
3. Define technical requirements for future solution including constraints & dependencies
4. Understand your existing data platform capabilities and any integration requirements
5. Consolidate and prioritise your requirements into a set of solution design goals
6. Discuss & review the options to meet design goals
7. Create a recommended solution design

The deliverable from this workshop is a report containing our strategic recommendations and detailed guidance on technical design and deployment for your environment.

Why Coeo?

Coeo are trusted analytics and data management experts, delivering technology strategy and support for businesses who need to get the most from their data.

We architect, optimise and migrate mission-critical transaction processing systems and deploy business intelligence solutions that win business confidence and deliver insight.
