

Microsoft Fabric Health Check

Boost Performance,
Security and Confidence

Microsoft Fabric is a leading analytics platform that, when properly set up, enables organisations to access reliable data quickly and collaborate efficiently. Coeo can provide expert guidance to assess your current setup, testing against best practices in architecture, security, governance, and performance, so you can make informed decisions about your setup with confidence.

Key Outcomes:

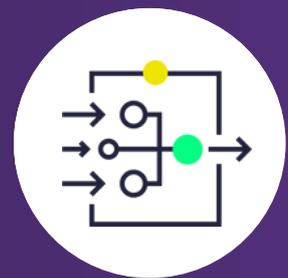

Optimisation Roadmap

Receive a personalised strategy to guide you to enhanced performance, improve security and streamline your Fabric environment.

Cost Analysis

Review your current licensing strategy and total cost, with recommendations for consolidation and optimisation.

Governance Review

Support your internal team with a focus on governance, operational excellence and improved data culture.

Microsoft Fabric Health Check

What's Included?

A full architecture review benchmarking your environment against best practice including:

- Architecture
- Security
- DevOps
- Cost Management
- Governance
- Administration
- Usability
- Performance & Scalability

An in-depth report and workshop with our consultants to discuss findings, recommendations and next steps.

Future-Proof Microsoft Fabric, We'll help you:

Regain Control

Recommendations to help you address deployment sprawl and reduce duplication between workspaces, artefacts, and processes.

Enhance Performance

Guidance to help you optimise data engineering, modelling, and reporting to resolve significant performance issues.

Improve Trust

Increase confidence in your platform and foster a stronger data culture.

Maximise your Investment

Advice on reducing time spent managing issues and improving total ownership cost.

Contact our team to schedule your Microsoft Fabric Health Check and start your journey towards a high-performing, secure, and trusted data platform.
