

# Data Governance Service

## Clarity, Governance & Control for Your Data Estate with Purview

Data is the lifeblood of your business, powering insights and enabling data-driven decision-making.

Microsoft Purview Data Governance provides the first step on your organisation's journey towards understanding your data: what exists, where it lives, who owns it, and how it's being used. Our Purview Data Governance offering brings together expert-led implementation and ongoing operational management, ensuring you get maximum value from your data governance investment.

If you're starting your data governance journey, preparing for AI and Copilot, or strengthening compliance across a complex multi-cloud estate, we help you deploy, scale, and continuously improve Purview as a strategic business asset.

### Proactive, Trusted Governance

We take a proactive approach, ensuring Purview remains effective and risk aware. Our teams continually review scan results, classification patterns, and emerging risks, to ensure you maintain a strong compliance and governance posture. We provide ongoing recommendations to:

- Improve data quality
- Strengthen governance controls
- Refine business glossary terms
- Increase adoption of certified data assets
- Prepare for AI and self-service analytics initiatives

# An Extension of your team

We can help you get the most from your data with the following offerings:

## Fractional CDO

Executive-level Data and AI leadership, without the full-time overhead. Access senior strategic leadership when you need it, to shape your roadmap, steer complex projects, and ensure your organisation gets value from Data & AI.

## Consulting

Helps you deploy quickly and effectively, from proof of concept through to full production rollout. We work with your teams to design a governance model that fits your organisation and accelerates time-to-value.

## Managed Service

Takes ownership of day-to-day operations, so you don't need internal Purview specialists, and your governance framework keeps pace with new data sources, regulatory demands, and business priorities.

## Planning for the Future

Your organisation's data landscape evolves quickly, and we help you stay ahead. Whether you're preparing for AI enablement, expanding into new data platforms, migrating from on-premises to Azure, or increasing governance maturity, we work with your stakeholders to design and support a roadmap that aligns with your long-term strategy.

## Why Choose Us

With deep experience across Microsoft's data platform and real-world Purview deployments, Coeo offers more than technical implementation, we deliver a partnership. Our combined Consulting and Managed Service approach ensures your Purview environment is set up correctly, maintained proactively, and continually optimised to reduce risk and unlock data value.
