

Open-Source Managed Service

Expert Support for PostgreSQL, MySQL and MariaDB

Organisations of all sizes are increasingly using technologies such as PostgreSQL, MySQL and MariaDB for their flexibility, cost efficiency, and community-driven innovation. As adoption grows, so too does the need for enterprise-grade reliability, security, performance and management.

At Coeo, we've evolved our Managed Service offering to meet these needs, extending our proven expertise in SQL Server and Azure data platforms to the Open-Source ecosystem. Our Open-Source Managed Service provides the same depth of insight, proactive support, and performance optimisation that our clients have come to expect, ensuring your Open-Source environments are robust and resilient.

Confidence in Every Query

Our advanced monitoring platform provides 24/7 visibility into your Open-Source databases, identifying and resolving issues before they impact your business. From patching and alert management to performance tuning, we keep your environment stable and secure, so you can focus on delivering value.

Proactive Monitoring & Support

- 24/7 monitoring and alerting
- Reactive incident response and resolution
- Regular patching and updates
- Proactive prevention of performance and reliability issues

Continuous Best Practice Assessment

Included as part of our Managed Service, our Best Practice Assessment ensures every instance is configured correctly, aligned with industry standards, and optimised for performance and stability. Regular reviews help identify risks early and keep your systems running efficiently.

Advanced Technical Assessment

For organisations seeking a deeper level of insight, Coeo offers an Advanced Technical Assessment, a comprehensive deep dive into your Open-Source environment. This engagement goes beyond the standard Best Practice Assessment already included and will review performance metrics, query execution plans, and security posture. You'll receive a detailed report with actionable recommendations to enhance performance, resilience, and compliance.

Why Choose us?

We bring over a decade of experience managing mission-critical SQL and Open-Source estates. Our team of database specialists combine best-in-class monitoring tools with proven expertise to help you maximise performance, minimise downtime, and gain confidence in your data platform.

Learn from Experience

Backed by Microsoft Data specialists, we provide best practices for managing and optimising SQL and Open Source environments.

Collaborative Partnership

We work alongside your team, ensuring smooth collaboration and clear communication.

Preparing to Modernise

Beyond day-to-day management, we help you plan for the future with tailored advice on scalability, security, and modernisation.

Trusted by Industry Leaders

Some of the customers we currently support include Bravissimo, Pantheon, Fortnum & Mason, Longview Partners and IMS.
