

Ready to modernise your analytics platform?

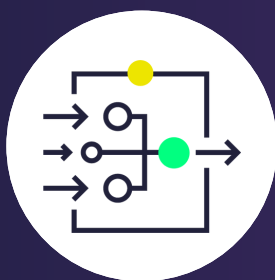

Analytics in 5 Days with Microsoft Fabric or Databricks

Make informed decisions about your analytics platform in five days. We design and deliver a focused analytics proof of concept using Microsoft Fabric or Databricks, built around your data and your priorities. The result is a clear view of how the platform works in your environment, before you commit further. Microsoft Fabric and Databricks are modern, cloud-based analytics platforms. They bring data ingestion, analytics, and reporting into a single environment, helping teams reduce complexity and move faster.

Working with Coeo, you assess how your chosen platform performs against real data and real use cases, giving you confidence in the decisions that follow.

Key Outcomes:

Deploy Analytics Platform

We deploy and configure Microsoft Fabric or Databricks to align with your architecture, security, and governance needs.

Ingest & Model Data

We ingest and model a structured data source to create analytics-ready datasets that support reporting and analysis.

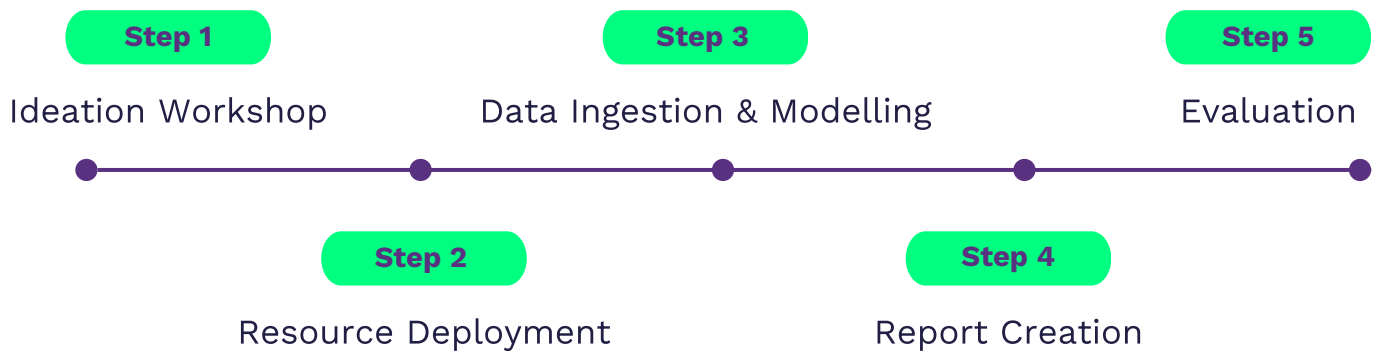

Measure Success

You evaluate platform performance using your own data, supported by a Coeo consultant focused on clarity and fit.

What's included in our 5-day POC?

- A 5-day analytics proof of concept using Microsoft Fabric or Databricks
- Ingested and modelled data with reusable assets
- Platform configuration aligned to your operating model
- Direct access to Coeo data experts throughout
- A working analytics or reporting output built on the platform
- Clear recommendations for next steps and scaling
- A structured playback session with findings and success measures

Step by Step Process

Why Choose a Modern Analytics Platform

Full AI Integration

Fabric and Databricks are fully integrated with AI, providing a solid foundation to accelerate your AI initiatives.

Deliver Business Insight

Quickly create reports, directly from your data sources & collaborate with instant visualisation tools with Copilot.

Improve Your Data Culture

Microsoft Fabric and Databricks support shared access to governed data across technical and business teams.

Evaluate Success & Plan Next Steps

Assess features, functionality, and overall platform capability against your organisation's data ambitions.
